

Contents

Thermal physics and thermology

- 6 Analysis of the influence of the thermophysical parameters of the reservoir and fluid on the process of cyclic steam stimulation
Gilmanov, A. Ya., Kovalchuk, T. N., Skoblikov, R. M., Fedorov, A. O., Khodzhiyev, Ye. N., & Shevelev, A. P.
- 28 The method of calculating the parameters of a heat exchanger with porous inserts based on the obtained criterion equation
Rydalina, N. V., Stepanov, O. A., Shabarov, A. B., & Aleksandrov, M. A.
- 46 Optimization and actualization of the algorithm for calculating integrated gas condensate field models
Kulagin, A. V., Varavva, A. I., & Toropov, E. S.
- 66 Analytical solution of heat equation taking into account convection with isothermal boundary conditions
Ganopolskij, R. M.

Fluid, plazma, and gas mechanics

- 83 Numerical study of the gas production process from a gas hydrate deposit in the presence of thermal and depression effects
Musakaev, N. G., & Belskikh, D. S.
- 100 The multilateral well model with complete vertical opening of naturally fractured reservoir
Maykov, D. N., & Makarov, S. S.
- 117 Sliding of water droplets onto a textured metal surface
Voytkova, K. A., & Kostoreva, Zh. A.

Mathematical modeling, numerical methods, and software systems. Information technologies

- 132 Application of neural network modeling methods in solving initial boundary value problems for partial differential equations
Vershinin, V. E., & Ponomarev, R. Yu.
- 148 On the question of the regularities in the transformation of the parameters of the relative phase permeability with a change in the dimension of the oil reservoir model
Bekman, A. D., Stepanov, S. V., & Zelenin, D. V.
